

KRETANJE TELA U GRAVITACIONOM POLJU

Goran Ivković, profesor fizike

DA PONOVIJMO OBRASCI

SLOBODAN PAD

$$v = g \cdot t$$

$$h = \frac{g \cdot t^2}{2}$$

$$v^2 = 2 \cdot g \cdot h$$

HITAC NANIŽE

$$v = v_0 + g \cdot t$$

$$h = v_0 \cdot t + \frac{g \cdot t^2}{2}$$

$$v^2 = v_0^2 + 2 \cdot g \cdot h$$

HITAC NAVIŠE

$$v = v_0 - g \cdot t$$

$$h = v_0 \cdot t - \frac{g \cdot t^2}{2}$$

$$v^2 = v_0^2 - 2 \cdot g \cdot h$$

$$h_{mah} = \frac{v_0^2}{2 \cdot g}$$

$$t_{mah} = \frac{v_0}{g}$$

v_0 – početna brzina tela

v – konačna brzina tela

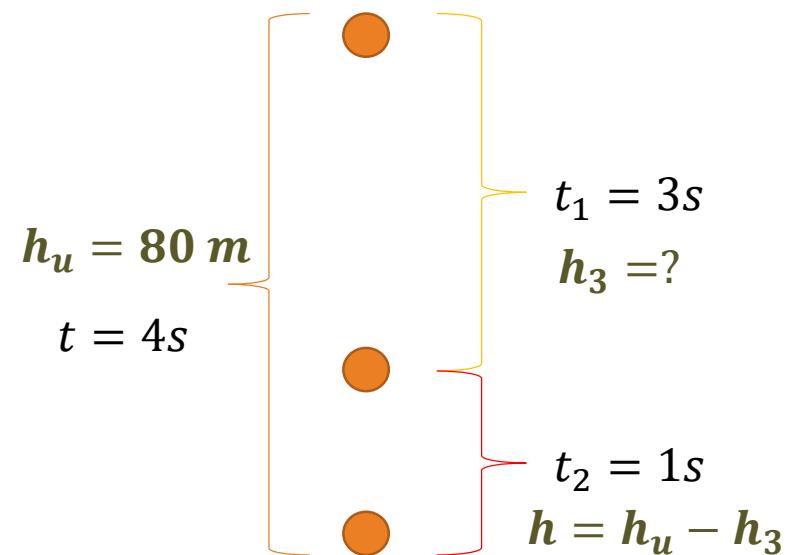

h – visina, put koji telo pređe

t – vreme

1. Telo slobodno pada sa visine 80 m. Koliki put pređe u poslednjoj sekundi kretanja?

$$h_U = 80 \text{ m}$$

$$h = \frac{g \cdot t^2}{2}$$

$$t^2 = \frac{2 \cdot h}{g}$$

$$t^2 = \frac{2 \cdot 80 \text{ m}}{10 \frac{\text{m}}{\text{s}^2}}$$

$$t^2 = 16 \text{ s}^2$$

$$t = \sqrt{16 \text{ s}^2}$$

$$t = 4 \text{ s}$$

$$h = \frac{g \cdot t^2}{2}$$

$$h_3 = \frac{10 \frac{\text{m}}{\text{s}^2} \cdot (3\text{s})^2}{2}$$

$$h_3 = \frac{10 \frac{\text{m}}{\text{s}^2} \cdot 9 \text{ s}^2}{2}$$

$$h_3 = 45 \text{ m}$$

$$h = h_U - h_3$$

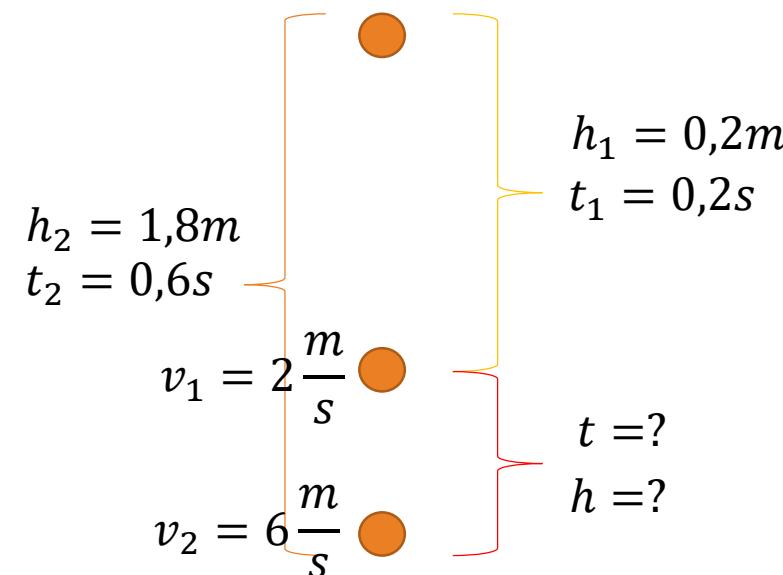

$$h = 80\text{m} - 45\text{m}$$

$$h = 35\text{m}$$

2. U dvema tačkama putanje tela koje slobodno pada brzine iznose 2 m/s i 6 m/s . Za koje vreme telo pređe to rastojanje? Koliko iznosi rastojanje između tačaka?

$$v_1 = 2 \frac{\text{m}}{\text{s}}$$

$$v_2 = 6 \frac{\text{m}}{\text{s}}$$

$$v = g \cdot t \quad \rightarrow \quad t = \frac{v}{g}$$

$$t_1 = \frac{v_1}{g} = \frac{2 \frac{\text{m}}{\text{s}}}{10 \frac{\text{m}}{\text{s}^2}} = 0,2\text{s}$$

$$t_2 = \frac{v_2}{g} = \frac{6 \frac{\text{m}}{\text{s}}}{10 \frac{\text{m}}{\text{s}^2}} = 0,6\text{s}$$

$$t = t_2 - t_1$$

$$t = 0,6\text{s} - 0,2\text{s}$$

$$t = 0,4\text{s}$$

$$v^2 = 2 \cdot g \cdot h \quad \rightarrow \quad h = \frac{v^2}{2 \cdot g}$$

$$h_1 = \frac{v_1^2}{2 \cdot g} = \frac{(2 \frac{\text{m}}{\text{s}})^2}{2 \cdot 10 \frac{\text{m}}{\text{s}^2}}$$

$$h_1 = \frac{4 \frac{\text{m}^2}{\text{s}^2}}{20 \frac{\text{m}}{\text{s}^2}} = 0,2\text{m}$$

$$h_2 = \frac{v_2^2}{2 \cdot g} = \frac{(6 \frac{\text{m}}{\text{s}})^2}{2 \cdot 10 \frac{\text{m}}{\text{s}^2}}$$

$$h_2 = \frac{36 \frac{\text{m}^2}{\text{s}^2}}{20 \frac{\text{m}}{\text{s}^2}} = 1,8\text{m}$$

$$h = h_2 - h_1$$

$$h = 1,8\text{m} - 0,2\text{m}$$

$$h = 1,6\text{m}$$

3. Telo je bačeno vertikalno naviše početnom brzinom 24 m/s. Koliki put pređe za 4 s?

$$v_0 = 24 \frac{m}{s}$$

$$t = 4s$$

$$h = ?$$

$$h = v_0 \cdot t - \frac{g \cdot t^2}{2}$$

$$h = 24 \frac{m}{s} \cdot 4s - \frac{10 \frac{m}{s^2} \cdot (4s)^2}{2}$$

$$h = 96m - \frac{10 \frac{m}{s^2} \cdot 16 s^2}{2}$$

$$h = 96m - 80m$$

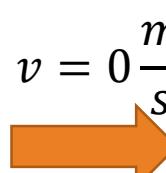

$$h = 16m$$

POMERAJ!

$$h = 16m$$

$$v = v_0 - g \cdot t$$

$$v = 0 \frac{m}{s}$$

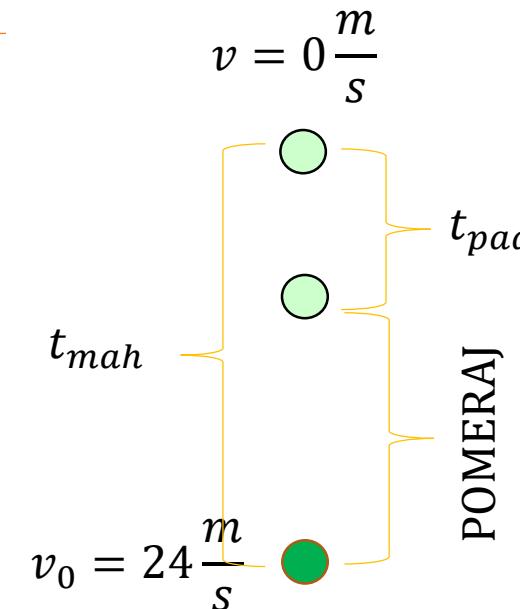

$$t_{mah} = \frac{v_0 - v}{g} = \frac{24 \frac{m}{s} - 0 \frac{m}{s}}{10 \frac{m}{s^2}} = 2,4s$$

$$t_{pad} = t - t_{mah} = 4s - 2,4s = 1,6s$$

$$h_{mah} = \frac{v_0^2}{2 \cdot g} = \frac{\left(24 \frac{m}{s}\right)^2}{2 \cdot 10 \frac{m}{s^2}} = \frac{576 \frac{m^2}{s^2}}{20 \frac{m}{s^2}} = 28,8m$$

$$h_{pad} = \frac{g \cdot t_{pad}^2}{2} = \frac{10 \frac{m}{s^2} \cdot (1,6s)^2}{2} = \frac{10 \frac{m}{s^2} \cdot 2,56 s^2}{2} = 12,8 m$$

$$h = h_{mah} + h_{pad} = 28,8m + 12,8 m = 41,6m$$

4. U razmaku 3 s, bačena su vertikalno uvis sa istog mesta dva tela sa istom početnom brzinom 20 m/s. Posle koliko vremena od bacanja drugog tela će se susresti?

$$\Delta t = 3 \text{ s}$$

$$v_0 = 20 \frac{\text{m}}{\text{s}}$$

$$t_1 = t_2 + \Delta t$$

$$h_1 = h_2$$

$$v_0 \cdot (t_2 + \Delta t) - \frac{g \cdot (t_2 + \Delta t)^2}{2} = v_0 \cdot t_2 - \frac{g \cdot t_2^2}{2} \quad \cdot 2$$

$$2 \cdot v_0 \cdot (t_2 + \Delta t) - \frac{2 \cdot g \cdot (t_2 + \Delta t)^2}{2} = 2 \cdot v_0 \cdot t_2 - \frac{2 \cdot g \cdot t_2^2}{2}$$

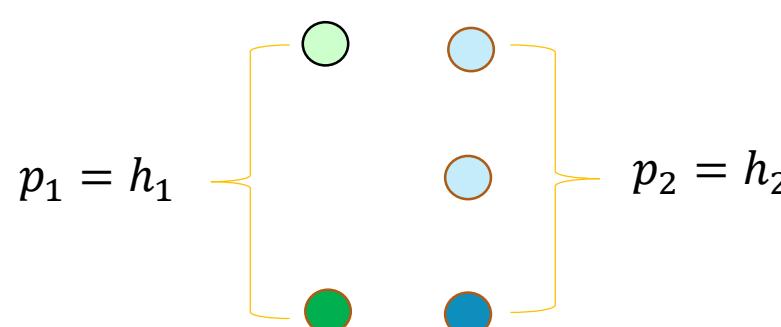

$$2 \cdot v_0 \cdot (t_2 + \Delta t) - g \cdot (t_2 + \Delta t)^2 = 2 \cdot v_0 \cdot t_2 - g \cdot t_2^2$$

$$2 \cdot v_0 \cdot t_2 + 2 \cdot v_0 \cdot \Delta t - g \cdot (t_2^2 + 2 \cdot t_2 \cdot \Delta t + \Delta t^2) = 2 \cdot v_0 \cdot t_2 - g \cdot t_2^2$$

$$\frac{2 \cdot v_0 \cdot t_2 + 2 \cdot v_0 \cdot \Delta t - g \cdot t_2^2 - g \cdot 2 \cdot t_2 \cdot \Delta t - g \cdot \Delta t^2}{2 \cdot v_0 \cdot t_2 - g \cdot t_2^2 - g \cdot 2 \cdot t_2 \cdot \Delta t - 2 \cdot v_0 \cdot t_2 + g \cdot t_2^2} = \frac{2 \cdot v_0 \cdot t_2 - g \cdot t_2^2}{g \cdot \Delta t^2 - 2 \cdot v_0 \cdot \Delta t}$$

$$-g \cdot 2 \cdot t_2 \cdot \Delta t = g \cdot \Delta t^2 - 2 \cdot v_0 \cdot \Delta t \quad \cdot (-1)$$

$$g \cdot 2 \cdot t_2 \cdot \Delta t = -g \cdot \Delta t^2 + 2 \cdot v_0 \cdot \Delta t$$

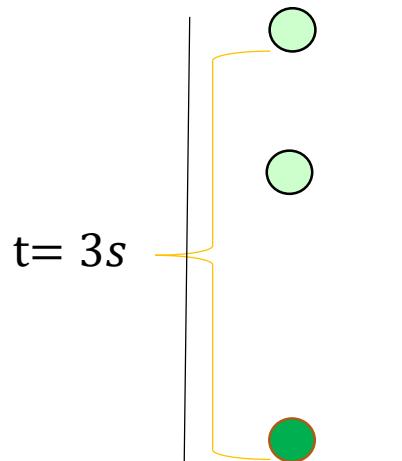

$$t_2 = \frac{-g \cdot \Delta t^2 + 2 \cdot v_0 \cdot \Delta t}{g \cdot 2 \cdot \Delta t} = \frac{-10 \frac{\text{m}}{\text{s}^2} \cdot 9\text{s}^2 + 2 \cdot 20 \frac{\text{m}}{\text{s}} \cdot 3\text{s}}{10 \frac{\text{m}}{\text{s}^2} \cdot 2 \cdot 3\text{s}} = \frac{-90\text{m} + 120\text{m}}{60 \frac{\text{m}}{\text{s}}} = 0,5\text{s}$$

5. Dečak baci u prazan bunar kamen, brzinom 2 m/s (hitac naniže) i on padne na dno za 3 s. Ako je brzina zvuka 10,5 puta veća od brzine kojom je kamen udario u dno bunara, naći vreme kretanja zvuka do dečaka.

$$v_0 = 2 \frac{m}{s}$$

$$t = 3s$$

$$v_Z = 10,5 \cdot v$$

$$v = v_0 + g \cdot t$$

$$v = 2 \frac{m}{s} + 10 \frac{m}{s^2} \cdot 3s$$

$$v = 2 \frac{m}{s} + 30 \frac{m}{s}$$

$$v = 32 \frac{m}{s}$$

$$v_Z = 10,5 \cdot 32 \frac{m}{s}$$

$$v_Z = 336 \frac{m}{s}$$

$$h = v_0 \cdot t + \frac{g \cdot t^2}{2}$$

$$h = 2 \frac{m}{s} \cdot 3s + \frac{10 \frac{m}{s^2} \cdot (3s)^2}{2}$$

$$h = 6m + \frac{10 \frac{m}{s^2} \cdot 9 s^2}{2}$$

$$h = 6m + 45m$$

$$h = 51m$$

$$t_Z = \frac{h}{v_Z} = \frac{51m}{336 \frac{m}{s}} = 0,15s$$
